PROFESSIONAL SUMMARY

Full-stack software developer with 10 years of experience building and scaling backend systems, microservices, and cloud-native applications that handle high-volume and sensitive data, specializing in Node.js with full-stack capability in React/TypeScript and Python. Proven track record of reducing infrastructure costs, architecting zero-data-loss disaster recovery systems, and owning end-to-end release management for high-throughput analytics platforms processing 120M+ events daily. Early adopter of AI-assisted and agentic development workflows, with experience mentoring engineers and leading architecture and code reviews. Strong collaborator across engineering, product, and business teams, with an ownership mentality and a bias toward shipping.

TECHNICAL SKILLS

- **Languages / Frontend:** JavaScript (ES6+), TypeScript, React, Next.js
- **Backend:** Node.js, Python, Express, RESTful APIs, Microservices
- **AI-Assisted Development:** Claude, GitHub Copilot, Devin (agentic workflows), MS Office Copilot
- **Cloud / DevOps / CI/CD:** Azure, AWS, Docker, Kubernetes, Jenkins, GitHub Actions
- **Databases & Messaging:** Cosmos DB, PostgreSQL, Redis, Kafka, EventHub
- **Monitoring & Testing:** ELK, Dynatrace, Jest, Postman
- **Tools:** Git, GitHub, Agile / Scrum

WORK EXPERIENCE

Senior Specialist Software Engineer (Promoted from Specialist Software Engineer, Aug 2026)

AT&T Communication Services - Bangalore, India

Jun 2023 – Present

- **Core Engineering & Leadership:** Senior backend engineer on a 6-member Analytics team building microservices, processing 120M+ daily events across 20+ downstream consumers and maintaining 99.9% uptime.
- Designed and implemented a disaster recovery architecture protecting against third-party and internal infrastructure failures including automated failover, backup event queuing and recovery orchestration. Achieved 0% data loss and prevented loss of 10M+ analytics events weekly, validated through real Production outages.
- Architected an in-house user journey tracing service replacing the Adobe Demdex API, eliminating external round-trip time from 200ms to under 30ms and cutting API costs by 40%.
- Pioneered early team-level adoption of AI-assisted development (Claude, GitHub Copilot, Devin) - among the first teams in the org to standardize AI into code reviews, documentation, and design workflows, thus cutting PR turnaround time by 25% and improving code quality; presented AI adoption strategy to SVP-level leadership.
- Mentor junior engineers, conduct architecture and code reviews, and have onboarded 3 new team members; conducted technical interviews and hiring decisions for junior developer roles.
- **Additional Contributions:** Collaborate cross-functionally with Product Managers, Product Owners, Business Analysts, and Infrastructure teams to align technical delivery with business priorities across multiple time zones.
- Built internal Python tools for data processing and automated testing using AI-assisted development, cutting concept-to-production time by up to 60%; built internal React/Next.js tools, including a tagging intake system, enabling business stakeholders to self-serve analytics workflows.
- Drive unit and integration testing practices using Jest as part of standard development workflow, improving code reliability across microservices.
- Own end-to-end weekly release management and managed performance/load testing ahead of major product launches (validated 50K messages/sec, 10x normal traffic); conceived and built the "Help Me Choose" feature, runner-up at Sept 2023 hackathon and selected for production.

Custom Software Engineering Specialist

Accenture (Client: AT&T) - *Mumbai, India*

Mar 2020 – Jun 2023

- Part of a 10-engineer Analytics Product team handling tagging, processing, and data collection across multiple business domains.
- Designed, built, and tested scalable, highly available APIs for a cluster of services supporting the analytics platform.
- Supported migration of 7 Node.js microservices (with EventHub, Redis, Cosmos DB) supporting 120M+ daily messages from on-prem to Azure, reducing infrastructure costs by an estimated 30–40% through elastic scaling and managed services, while improving availability and deployment velocity.
- Delivered consistently high-quality work exceeding client expectations, resulting in a full-time offer from AT&T.

Senior Software Developer (Full-Stack)

Vistaar Systems - *Mumbai, India*

Jul 2016 – Mar 2020

- Built and maintained RESTful APIs for the Solution Delivery team supporting a Price Optimization SaaS product used by multiple US-based clients.
- Led full-stack development and migration of a Reporting Framework adopted across teams, used by 20–30 end users to build reports and dashboards, reducing initial setup time by 50%.

PERSONAL PROJECTS

- Built a personal expense tracker and a financial portfolio dashboard using React, demonstrating full-stack frontend capability outside of work scope.

EDUCATION

- Bachelor of Engineering in Information Technology
Don Bosco Institute of Technology, Mumbai University

2012 – 2016

CERTIFICATIONS

- Azure Fundamentals (AZ-900) - Aug 2021
